021 864 5200 (Wellington)
1. **Introduction**

From 2018, CPUT offers a new B Ed Honours qualification, namely B Ed Honours in Teaching and Learning. This qualification will be aligned with the Minimum Requirements for Teacher Education Qualifications and the Higher Education Qualifications Sub-Framework. As such, this qualification will be pegged at level 8 on the 10-level NQF framework.

2. **Purpose of the BEd Honours degree**

The BEd Honours degree is a first postgraduate degree in education and is intended to prepare students for research-based postgraduate study. It serves to consolidate and deepen expertise in a specific area in education, and to develop research capacity in the methodology and techniques of the area.

It demands a high level of theoretical engagement and intellectual independence, and includes conducting and reporting research under supervision, worth at least 30 credits.

The B Ed Honours in Teaching and Learning offered by CPUT consists of a generic component and an elective component. The generic component comprises current relevant educational themes and perspectives (offered in the module Education 5) as well as research methods and techniques (offered in the modules Introduction to Research in Education and Research Methods in Education). The generic component serves as an essential, foundational underpinning for the elective component, the latter which comprises a specialisation module (e.g. Inclusive Education, Mathematics, Science, etc.) as well as a research project conducted within the selected field of specialisation.

The purpose of the qualification is then to consolidate and deepen students’ knowledge of their selected specialisation and to develop research capacity in the methodology and techniques of that specialisation in order to prepare students for advanced post-graduate studies in the selected field of specialisation. Being the first post-graduate degree in education, the qualification aims to equip students with a high level of theoretical engagement and intellectual independence relevant to their chosen specialisation, as well as to understand the important role of research and specialised skills related to exploring key issues within their chosen specialisation. Students will plan, conduct and report on a research project under supervision which will address contemporary and critical issues in the selected specialisation.

Students will be provided with sufficient depth of knowledge and skills to enable their continued professional and personal intellectual development, and the opportunity for further postgraduate study at NQF level 9 and higher.

2. **Admission requirements for B Ed Honours in Teaching and Learning**

The minimum admission requirement is a level 7 qualification (on the 10-level NQF framework) that includes an education qualification.
For B Ed Honours in Teaching and Learning, the minimum admission requirement is

- A Bachelor of Education degree with a minimum average of 60% and a minimum of 60% in the final undergraduate year in the subject selected as specialisation module in BEd Hons, OR
- Another Bachelor’s degree which includes a subject cognate to the module selected as specialisation module in BEd Hons on at least second year level, with a minimum average of 60% for the degree and a minimum of 60% in the aforementioned subject, followed by a recognised professional teaching qualification which includes curriculum studies cognate to the module selected as specialisation module in BEd Hons, with a minimum average of 60% in the teaching qualification and a minimum of 60% in the aforementioned curriculum studies, OR
- An appropriate 360 cr National Diploma which includes a subject cognate to the module selected as specialisation module in BEd Hons on at least second year level, with a minimum average of 60% for the degree and a minimum of 60% in the aforementioned subject, followed by a recognised professional teaching qualification which includes curriculum studies cognate to the module selected as specialisation module in BEd Hons, with a minimum average of 60% in the teaching qualification and a minimum of 60% in the aforementioned curriculum studies, OR
- A non-degree four-year professional teaching qualification with a minimum average of 60% and a minimum of 60% in the final undergraduate year in the subject selected as specialisation module in BEd Hons, as well as an Advanced Diploma in a cognate sub-field of Education, with a minimum average of 60% and a minimum of 60% in the final undergraduate year in the subject selected as specialisation module in BEd Hons.

In addition, a prospective student must demonstrate a sufficient level of competence in academic literacy, by completing a writing task based on locating and retrieving academic texts such as selected journal articles, extracting key arguments from these, and critically collating these into a coherent, structured written text, while making use of correct referencing techniques. (See Section 6)

Examples of the above-mentioned qualifications required for admission are:

- A four-year B Ed degree, or
- An appropriate three-year B degree plus an education qualification such as PGCE, or
- An appropriate three-year ND (National Diploma) plus an education qualification such as PGCE, or
- A four year (former) college of education Higher Diploma in Education (HDE), followed by a level 7 Advanced Diploma in Education (ADE), or
- a three year (former) college of education Diploma in Education (DE), followed by an Advanced Certificate in Education (ACE), followed by a level 7 Advanced Diploma in Education (ADE), or
- a three year (former) college of education Diploma in Education (DE), followed by a Further Diploma in Education (FDE), followed by a level 7 Advanced Diploma in Education (ADE)

3. **Articulation**

Upon completion of B Ed Honours in Teaching and Learning, a student may apply towards studying a Master’s degree in Education (M Ed).
4. **Structure of the B Ed Honours in Teaching and Learning**

5. **Study programme of the B Ed Honours in Teaching and Learning for 2018**

All modules are year modules.

The qualification will be offered **part-time** over two years, or **full-time** over one year (the latter depending on the number of students).

**Part-time (2 years):**

- Year 1: Education 5
  - Introduction to Research in Education (students can be exempted from this module after passing a diagnostic test)
  - Research Methods in Education

- Year 2: Selected specialization module
  - Research project within the selected specialization field

**Full-time (1 year):**

- All of the above modules

On Mowbray campus, the compulsory subjects will be offered over 12 weekends (Friday evening and Saturday morning) and the specialization subjects on one late afternoon/evening per week for 30 weeks.

On Wellington campus, all subjects are offered on Tuesday and Thursday late afternoons/evenings for 30 weeks.
NB:
1. A specialization subject in B Ed Honours in Teaching and Learning will only be offered if there are enough students who apply and register for that specialization subject.
2. A specialization subject in B Ed Honours in Teaching and Learning will not necessarily be offered on both Mowbray and Wellington campus. To ensure sufficient numbers per specialization, it may be decided to only offer it on Mowbray or Wellington.
3. Final decisions regarding the above will only be made once students have applied and the selection procedure has been completed. This could be in November of the preceding year.
4. It is therefore recommended that you apply for at least two specialization subjects, and indicate your order of preference, AND your preferred campus.

Subjects offered on the Mowbray and Wellington campuses:

On the Mowbray campus this qualification will be offered in English, and on Wellington in dual medium (Afrikaans and English).

*Note that this is a post-graduate qualification, and that students will therefore be expected to work extensively on their own. They can expect to spend per subject 2 to 5 hours on their own for every hour contact time. They will also conduct a fairly extensive research project, which, experience has shown, can be very time-consuming.*

Students will be required to do written assignments. These assignments must be *typed*, and *submitted electronically* (i.e. by e-mail or on BlackBoard). Therefore, students are required to be sufficiently computer literate. If not, they need to make personal arrangements to become computer literate before enrolling for the B Ed Honours.
6. **Application procedure for the B Ed Honours for 2018**

Applications are made on-line, on the CPUT website (www.cput.ac.za).

Applications must be completed by **31 October** of the year preceding your intended study.

Your application must include the following:
- A copy of your identity document
- Certified copies of all your qualifications
- Certified copies of academic transcripts of all previous qualifications (i.e. subjects passed and marks obtained)
- A typed record of your experience in education (or related field), i.e. a short CV
- Your preferred specialisation subjects (at least two in order of preference), preferred campus and whether full-time or part-time
- A cover letter, in which you motivate why you want to enrol for your chosen specialisation(s)
- The completed writing task, which follows below:

**A prospective student must demonstrate a sufficient level of competence in academic literacy.**

**Please submit a 800-1000 word academic essay on ONE of the following topics:**

**The value of research in education**

**Or**

**The value of teacher professional development**

**Use the following guidelines for this essay:**
- Locate and retrieve at least 6 academic texts (e.g. journal articles and/or books).
- Extract key arguments from these texts.
- Critically collate these arguments into a coherent, structured written text.
- Make use of the correct referencing techniques using the Harvard style of referencing.

**Incomplete and late applications will not be considered.**

7. **Fees**

- Class fees: Approx. R20 000 in total
8. **Subject information**

Introduction to Research.

This module equips students with fundamental, generic knowledge and skills which, combined with the disciplinary pedagogical and content knowledge acquired from their specialization, should enable them to conduct an independent research project of 30 credits in their specialization, under the supervision of a specialization expert.

As such, this module will enable students to:
- Understand the paradigms within which educational research is situated
- Understand the research process and can apply it to develop a research project in their specialization
- Understand the difference between ordinary knowledge and scientific knowledge
- Can critically engage with educational research literature
- Understand educational research methodology (both quantitative and qualitative) and the range of research methods utilized, and can implement them
- Can design and implement suitable data collection instruments, can analyze (qualitative and quantitative) data collected by collection instruments, can interpret and discuss results
- Understand the principles and obligations of ethics in research, and are able to adhere to these

Research project

This compulsory, fundamental (generic) module is one of the core components of the qualification. It is on an advanced level as it builds on and integrates knowledge and skills students should have acquired in the module Research Methods in Education as well as in the Specialisation module. It entails an independent research project under the supervision of an academic supervisor in the particular field of specialisation. It includes
- Formulating a research topic and research problem/question
- Undertaking a comprehensive literature review
- Deciding on and designing a research approach and research plan

On successful completion of this module, students are expected to be able to independently undertake a comprehensive research project under the supervision of an academic supervisor. This research project will include a research proposal, and will be conducted in the discipline in which the student does his/her specialisation module. In particular, students are expected to be able to:
- Identify and formulate a research problem, research question and research title
- Locate, interrogate and report on literature relevant to their field of specialisation, and in particular to the subfield in which they conduct their research
| Afrikaans First Language | This specialization module is one of the elective components of the qualification. It is on an advanced level as it builds on the basic knowledge and skills that students in Afrikaans First Language should have acquired in their undergraduate studies. This module equips students with specific knowledge and skills which, combined with knowledge and skills acquired in the module Research Methods in Education, should enable them to conduct an independent research project of 30 credits in their specialization field (i.e. Afrikaans First Language), under the supervision of a specialization expert. As such, this module will enable students to:
- Understand the paradigms and paradigm shifts within the academic discourse in Afrikaans as First Language
- Understand, analyze and synthesize complex and abstract issues in a wide range of texts.
- Reflect and understand issues of the complex structure of discourse in the Afrikaans Language and to apply their knowledge in different contexts.
- Be critical and discerning readers of various genres in Literature as well as of literary reviews.
- Identify and address ethical issues as reflected in a variety of uses of language in different contexts.
- Demonstrate the ability to present and communicate academic ideas and trends in various contexts. |
| --- | --- |
| On successful completion of this module, students are expected to be able to:
- Understand the grammatical structure and implications of the use of Afrikaans and is able to apply this knowledge in different contexts.
- Critically evaluate multiple sources on grammatical use in literary texts and discourse.
- Demonstrate the complexities of applying or transferring the appropriate knowledge to a variety of language contexts.
- Analyze and synthesize complex and abstract issues relevant to the use of Afrikaans as a First Language.
- Identify and address ethical issues based on critical reflection as reflected and found in a variety of language uses and contexts, i.e. critical literacy.
- Demonstrate the effective use of language in the gathering and selection of information, the synthesis and evaluation of data in different language contexts.
- Demonstrate the ability to present and communicate academic ideas and discourses in various contexts
- Demonstrate the ability to reflect on and apply effective use of language as a medium of learning and communication.
- Manage own learning – demonstrate the ability to apply, in a self-critical manner, accumulated knowledge of the structure and use of Afrikaans in various familiar and unfamiliar contexts. |
- Understand and reflect on the effective use of language in the gathering of information, the synthesis and evaluation of data in different contexts.
- Conduct an independent research project on an aspect of their own choice regarding Afrikaans Language Teaching in the primary/secondary school.

| Business Management | This specialization module is one of the elective components of the qualification. It is on an advanced level as it builds on the well-rounded knowledge base acquired in undergraduate studies. This module equips students with advanced knowledge, skills, values and attitudes which should enable them to demonstrate consolidated and deepened expertise of Business Management as a module.

As such, this module aims to enable students to:

- Demonstrate a high level of theoretical engagement and intellectual independence through advanced reflection and development by means of a systematic survey of current thinking, practice and research methods applicable to the following sub-areas of Business Management:
  - Strategic Management
  - Marketing Management and Communication/Advertising
  - Human Resource management
  - Environmental management
  - E Business

- Demonstrate a critical ability to identify, evaluate and solve defined, routine and new problems within familiar context, and to apply solutions based on relevant evidence and procedures or other forms of explanation appropriate to the teaching of Business Management.

- Demonstrate research capacity relating to the teaching and learning of Business Management.

| Computer Applications | This specialization module is one of the elective components of the qualification. On successful completion of this module, students are expected to be, at an advanced level:

- Understand how to apply Business Theories to research in education
- Demonstrate the ability to critically interrogate multiple sources of knowledge in Business Management
- Apply or transfer appropriate standard procedures, processes or techniques to unfamiliar problems in Business Management
- Demonstrate the ability to use a range of specialized skills to identify, analyse and address complex or abstract problems relating to the teaching of Business Management
- Demonstrate the ability to identify and address ethical issues based on critical reflection in Business Management
- Manage own learning—demonstrate the ability to apply in a self-critical manner, learning strategies in Business Management
- Display accountability—demonstrate the ability to take full accountability for his/her work, decision making and use of resources.
<table>
<thead>
<tr>
<th>Technology</th>
<th>It is on an advanced level as it builds on the basic knowledge and skills that students in Computer Applications Technology should have acquired in their undergraduate studies. Computer Applications Technology (CAT) is the study of the integrated components of a computer system (hardware and software) and the practical techniques for their efficient use and application to solve everyday problems. The solutions to problems are designed, managed and processed via end-user applications and communicated using appropriate information and communication technologies (ICTs). ICTs are the combination of networks, hardware and software as well as the means of communication, collaboration and engagement that enable the processing, management and exchange of data, information and knowledge. The module content will enable the student to teach and manage learning in a CAT environment using ICT to solve problems at advanced level and with fluency, as well as to engage in independent research into aspects of the teaching and learning of CAT. Level and with fluency, able to: - Identify and use ICT to solve every day problems using end user applications - Critically evaluate and apply problem solving principles within the didactic paradigm of the curriculum and assessment policy statement (CAPS) and in CAT in particular - Contribute to systematic and disciplined thinking, with particular reference to the area of CAT - Provide well-founded interpretations of literature in the area of CAT. - Select and use techniques and technologies for the collection, storage, processing of data into information that leads to knowledge and decision-making - Select and operate the physical and non-physical components of a computer system in order to assist in problem solving using end user applications - Select and use network technologies to facilitate the management and dissemination of digital data - Select and use internet technologies for the digital presentation of multimedia data.</th>
<th>On successful completion of this module, students are expected to be able to: - Know and understand all relevant underlying disciplinary concepts and theories - Evaluate and analyze resources and methodologies within the discipline - Synthesize and integrate various components, strategies and techniques and apply it to practice - Use a range of specialized skills to identify, analyze and address complex problems through related research - Display accountability for his/her work and decision making regarding the discipline.</th>
</tr>

<tr>
<td>Drama</td>
<td>This specialization module is one of the elective components of the qualification. The module is at an advanced level further developing students’ required underpinning disciplinary knowledge and practical skills from undergraduate studies. The focus of the module is on enhancing the depth of knowledge whilst strengthening the application of knowledge and expanding practical skills. The module will enable students to: - Analyze and critically evaluate methodology and practices within the discipline - Critically engage with educational research material - Apply appropriate techniques and procedures to practical situations - Demonstrate the ability the use a range of specialized skills within the discipline. On successful completion of this module, students are expected to be able to: - Analyze and critically evaluate methodology and practices within the discipline - Critically engage with educational research material - Apply appropriate techniques and procedures to practical situations - Demonstrate the ability the use a range of specialized skills within the discipline.</td>
<td>On successful completion of this module, students are expected to be able to: - Analyze and critically evaluate methodology and practices within the discipline - Critically engage with educational research material - Apply appropriate techniques and procedures to practical situations - Demonstrate the ability the use a range of specialized skills within the discipline.</td>

undergraduate foundation phase program. This module equips students with fundamental knowledge and skills on an advanced level of both pedagogical and content knowledge of literacy, numeracy and grade R. The knowledge gained here will be used to execute the research project. As such, this module aims to enable students to:
- Understand the paradigms of literacy, numeracy and grade R as well as where educational research in this discipline is situated.
- Identify a research problem and utilize the knowledge and skills gained from the research methodology to find a solution to the problem.
- Understand the difference between ordinary knowledge and scientific knowledge in literacy, numeracy and grade R.
- Can critically engage with recent and relevant literature that has specific reference to literacy, numeracy and grade R.
- Critically read and think about research literature pertaining to theoretical frameworks applicable to literacy, numeracy and grade R.
- Understand educational research methodology (both quantitative and qualitative) and the range of research methods that can be used in research within the foundation phase as well as to implement these methods within the research project.
- Can design and implement suitable data collection instruments for the research project and analyse data collected to make interpretations of the results.
- Understand the principles of ethics in research and implement the procedures of research and should be able to adhere to these.

</tbody>
</table>
undergraduate studies.

Human Movement Science
- equips students to specialize in Human Movement Science, theoretical and practical knowledge and application thereof, including but not limited to sports coaching, psychology and recreation
- provides them with fundamental background knowledge and practical application in motoric principles
- provides them with fundamental background knowledge and practical application to teach learners with physical disabilities
- equips them with relevant knowledge and skills to undertake an independent research project within this discipline

and an understanding of how to apply such knowledge in the school environment
- plan, organize and discuss various topics and evaluate knowledge and knowledge production
- understand, select, analyze and apply appropriate procedures and techniques to different problems and situations in the class
- use a range of specialized skills to identify, analyse and address complex and abstract problems in Human Movement Science
- identify and address ethical issues based on critical reflection in Human Movement Science and research practices
- access, process and manage information related to Human Movement Science
- offer creative insight and solutions to problems and issues appropriate to the context
- organize and manage programmes applicable to the module
- manage own learning by demonstrating the ability to apply, in a self-critical manner, learning strategies
- display accountability to take full accountability for his/her work, decision making and use of resources.

| Inclusive Education | This elective module is on an advanced level as it builds on basic knowledge and skills of Inclusive Education which students should have acquired in their undergraduate studies. This module explores issues around Inclusive Education focusing on learners who experience barriers to learning and development from different perspectives: To enhance the skill of Inclusive Education in educational settings, particularly:

- the holistic development of the child;
- to strengthen the application of knowledge through practical approaches in educational settings;
- the micro political climate that helps or hinders the inclusion process.

Cross-linkages are made throughout the course to emphasize how these perspectives cannot be viewed in isolation.

The needs of learners experiencing barriers are addressed as well as how to improve student’s general teaching skills |
| | On successful completion of this module, students are expected to be able to:

- Scope of knowledge: the student will be able to demonstrate how to apply understanding of Inclusive Education theories in a variety of IE settings;
- Knowledge literacy: the student will be able to interrogate and evaluate multiple sources of knowledge in IE;
- Method and procedure: the student will be able to demonstrate an understanding of the complexities and uncertainties of developing an intervention programme for their learners;
- Problem solving: the student will be able to demonstrate an ability to identify, analyse and address complex or abstract problems drawing from their IE Practice;
- Ethics and professional practice: the student will be able to demonstrate an ability to identify and address ethical issues based on critical reflection on the suitability of different ethical value systems to specific IE contexts;
- Accessing, processing and managing information: the student will be able to gather, synthesize, evaluate, and manage data collected from their IE practice; |
This module will enable students to:
- gain an increased understanding of learners experiencing barriers to learning and development and how these can be understood from a developmental perspective, a human rights perspective, diversity, social justice, equity and equality;
- gain knowledge of intrinsic and extrinsic barriers to learning and development;
- understand global, historical and local trends in the education of learners experiencing barriers;
- explore differing educational settings within an inclusive education perspective;
- debate ‘inclusionary pedagogy’ and issues of change;
- explore assessment issues and how they affect learners experiencing barriers;
- learn how to adapt the classroom environment, learning materials and teaching strategies in order to educate learners experiencing barriers more effectively;
- explore socio-political aspects of inclusive education, within the school and the community including issues such as social class, gender and ethnicity on achievement and underachievement;
- To explore perspectives on parents and community involvement;
- Provide detail on specific disabilities and how to practically accommodate learners experiencing barriers in the classroom and educational setting;
- understand theories and practices of social, emotional and behavioural management;
- examine the support structures available and how to access these to better meet both the needs of learners and educators;
- understand refugee children and children with HIV/AIDS;
- Producing and communicating information: the student will be able to present and communicate academic, professional and didactic knowledge to the IE Practice stakeholders (parents, teachers, principals etc). This feedback will consist of creative insights, rigorous interpretations and solutions to the IE Practice;
- Context and systems: the student will be able to operate effectively within a system based on an understanding of the roles and elements within the system based on the work of Bronfennbrenner;
- Management of learning: the student will be able to reflect on their professional ongoing learning needs in a self-critical manner;
- Accountability: the student will be able to take full responsibility for his/her work, decision making and use of resources, and full accountability for the decisions and actions of others where appropriate.

Mathematics

This specialization module is one of the elective components of the qualification. It builds on the knowledge and skills acquired in Mathematics and Mathematics Curriculum Studies in undergraduate studies towards an advanced level of understanding of

On successful completion of this module, students are expected to be able to:
- Demonstrate understanding of relevant and current perspectives and theory in mathematics education;
- Explore application of theory within the practice of teaching mathematics in
relevant perspectives, theory and practice within mathematics education.

Four organising principles form the foundation of this course: problem-solving and modeling, mathematical language, mathematical reasoning; and assessment. These are explored within the context of teaching and learning selected mathematics content and are linked to empirical research within the field of mathematics education.

different learning contexts
- Reflect on issues related to the role of language in the teaching and learning of mathematics in multiple settings
- Demonstrate knowledge of mathematical problem-solving and modeling within the context of algebra and geometry including application to the school curriculum
- Develop mathematical reasoning with a focus on generalisation, justification and proof
- Establish links between teaching, learning and assessment which involves understanding of the purpose, nature and practice of assessment of mathematics in South Africa.

| Mathematical Literacy | This module in the FET band is one of the elective components of this qualification. It builds on the knowledge and skills acquired in Mathematical Literacy and Mathematical Literacy Curriculum Studies in undergraduate studies towards an advanced level of understanding of relevant perspectives, theory and practice within mathematical literacy education. Four organising principles form the foundation of this course: learning theories and teacher beliefs and identities; problem-solving and modeling, language in the teaching and learning of Mathematical Literacy; and assessment. These are explored within the context of teaching and learning selected mathematical literacy content in various contexts and are linked to empirical research within the field of mathematical literacy education. | On successful completion of this module, students are expected to be able to:
- Understand how to apply the theories underpinning Mathematical Literacy Education
- Demonstrate an ability to critically interrogate multiple sources of knowledge in Mathematical Literacy and the teaching thereof to diverse learners in different learning environments
- Apply or transfer appropriate instructional strategies, processes or techniques to unfamiliar problems in module content, learning and selection of applicable contexts
- Access, process and manage suitable Mathematical Literacy content in different contexts to develop creative responses and solutions to problems
- Manage own learning – demonstrate the ability to apply, in a self-critical manner, learning strategies in developing a Mathematical Literacy teacher identity
- Able to create, present and communicate Mathematical Literacy instructional materials and solutions in a creative and rigorous way, appropriate to the context of Mathematical Literacy
- Display accountability – demonstrate the ability to take full accountability for his/her work, decision making and use of resources |

| Music | This is an elective module for both GET and FET on an advanced level and builds on basic knowledge and practical skills which students should have acquired in undergraduate studies. Practical Component: Grade VIII (Unisa, Trinity, Royal Schools) in any musical instrument or Choral Conducting (in which case a 45 | On successful completion of this module, students are expected to be able to:
- Reach the required standard of Practical Performance in the chosen speciality;
- Evaluate, apply and demonstrate knowledge in practice of the different Style Periods;
- Demonstrate an ability to illustrate effective orchestration-technique required for schools; |

**Second Language/First Additional Language**

This elective module is one of the specialization modules of the qualification. It is offered on an advanced level as it builds on basic knowledge and skills language teaching students should have acquired in undergraduate studies.

This module equips students with advanced specialized knowledge and skills in second language teaching which should enable them to conduct an independent research project of 30 credits in this field under the supervision of a specialization expert.

As such, this module will enable students to acquire an understanding of:

- the paradigms in which second language teaching and learning theory is situated;
- the principles of second language curriculum design, interpretation and implementation;
- the complexities of pedagogical content knowledge within the field of second language teaching and learning.

On successful completion of this module, students are expected to be able to:

- Demonstrate an understanding and knowledge of language acquisition theories
- Demonstrate the ability to interrogate multiple sources of knowledge about theories of second language teaching and learning
- Identify, analyse and address the complexities of second language curricula at the chosen level(s) of specialization, e.g. Foundation Phase, Intermediate Phase, Senior Phase and FET
- Demonstrate pedagogical content knowledge (including pedagogical approaches, strategies and techniques) within the field of second language teaching and learning, and at the chosen level of specialization, e.g. Foundation Phase, Intermediate Phase, Senior Phase and FET

**Science**

This specialization module is one of the elective components of the qualification. It is on an advanced level as it builds on the basic knowledge and skills that

On successful completion of this module, students are expected to be able to:

- demonstrate an understanding of the values and rights enshrined in the South
students in Life Sciences/Physics/Chemistry/Natural Sciences should have acquired in their undergraduate studies. This subject equips students with specific knowledge and skills which, combined with knowledge and skills acquired in the module Research Methods in Education, should enable them to conduct an independent research project of 30 credits in their specialization field (i.e. Life Sciences/Physics/Chemistry/Natural Sciences), under the supervision of a subject specialist.

As such, this subject will enable students to:

- understand the quantitative and qualitative paradigms of research in science
- have a good understanding of scientific research methodological designs
- develop their skills in scientific literacy and be able to demonstrate the ability to present and communicate academic ideas and trends in various contexts.
- reflect and understand issues regarding context-based teaching and alternative frameworks in the teaching of science
- critically engage with recent and relevant literature that has specific reference to various issues such as assessment, diversity and indigenous knowledge systems related to science and science education
- identify and address ethical issues as reflected in the use and application of science in different contexts
- equip students to have a deeper understanding of the theoretical and practical knowledge and applications of certain topics in Life Sciences/Physics/Chemistry/Natural Sciences
- provide them with fundamental background knowledge regarding contemporary issues and modern applications in Life Sciences/Physics/Chemistry/Natural Sciences
- African Constitution (Act 108 of 1996), how these values and rights permeate the South African Schools Act (No 84 of 1996) and other relevant legislation and how these values could be developed through the teaching and learning process, in particular, in science.
- demonstrate and / or show evidence of having acquired the seven roles and associated competencies for Educators for Schooling (Norms and Standards for educators: Government gazette: Department of Education: 4 February 2000) and competencies as outlined in the HEQF and SAQA frameworks,
- have developed a solid grounding in the principles as well as the teaching and learning theories that underpin the development of the National Curriculum Statement (NCS) and Curriculum and Assessment Policy Statement (CAPS) for Life Sciences/Physics/Chemistry/Natural Sciences.
- demonstrate the ability to, through the application of appropriate research methodologies, reflect on issues in the teaching and learning of science,
- demonstrate the ability to identify and address ethical issues based on critical reflection of contemporary issues and modern applications in Life Sciences/Physics/Chemistry/Natural Sciences
- explore application of theory within the practice of teaching science in different learning contexts
- reflect on issues related to the role of language in the teaching and learning of science in different contexts,
- demonstrate the ability to critically interrogate multiple sources of knowledge in research about assessment, diversity and indigenous knowledge systems related to science and science education
- demonstrate knowledge of and engagement in Life Sciences/Physics/Chemistry/Natural Sciences and an understanding of how to apply such knowledge in the school environment
- have developed the skills of doing research within the educational environment and in particular the science classroom.

Technical and Vocational Education
and Training

Training (TVET) practitioners. While an ADE (TVT) is not a requirement, it would be a decided advantage. The module will provide broad, but high level, introduction to technical and vocational education and training as a field of teaching and learning with the aim of enabling TVET and other educational practitioners to undertake advanced studies involving a systematic survey of current thinking, practice and research in this area of specialization.

The module will enable students to demonstrate a high level of theoretical engagement and intellectual independence through advanced reflection and development by means of a systematic survey of current theory, practice and research methods applicable to the application of TVET within the current national and international context by means of a focus on the following areas:

- Vocational education and training vs academic education, adult education, special needs education and skills training
- Vocational education as a craft, profession and pedagogy
- Curriculum planning within various vocational settings
- Methods and media commonly used in various forms of vocational education
- Assessment in vocational education
- Work integrated learning in vocational education

Students will be expected to demonstrate a critical ability to identify, evaluate and solve defined, routine and new problems within familiar contexts, and to apply solutions based on relevant evidence and procedures or other forms of explanation appropriate to the TVET environment.

Visual Art

This module is an elective component in the BEd Honours.

The underpinning knowledge is a fundamental understanding of the disciplinary pedagogical knowledge of Visual Art Education, as well as the core content of Visual Art theory and practice.

As such, this module will enable students to develop a deeper understanding of the disciplinary pedagogical theories and current education research to the TVET environment

- Demonstrate the ability to critically interrogate multiple sources of knowledge relating to TVET with existing international and national contexts.
- Apply or transfer appropriate standard procedures, processes or techniques to unfamiliar problems within TVET educational institutions
- Demonstrate the ability to use a range of specialized knowledge and skills to identify, analysis and address complex or abstract problems relating to TVET.
- Demonstrate the ability to identify and address ethical issues based on critical reflection of current TVET theory and practice.
- Manage own learning, and demonstrate the ability to apply in a self-critical manner, knowledge of current TVET theory and practice.
- Display accountability-demonstrate the ability to take full accountability for his/her work, decision making and use of resources.

On successful completion of this module, students are expected to be able to:

- Demonstrate Visual Art Education literacy and the ability to draw on and apply the body of knowledge and methods appropriate to Visual Art Education.
- Demonstrate an understanding of method and procedure, and appreciate how to select, apply or transfer appropriate
practices that are embraced in Visual Art Education.
Students will complete a practical portfolio which will result in an individual, externally-moderated exhibition.

- Critically review information in the context of Visual Art Education in order to develop creative responses to problems.
- Produce a substantial practical portfolio which demonstrates an ability to present academic, professional and aesthetic ideas effectively, offering creative insights, rigorous interpretations and solutions to problems and issues appropriate to Visual Art Education.
- Manage production and learning and an ability to apply, in a self-critical manner, learning strategies which effectively address his or her professional and ongoing learning needs and the professional and ongoing learning needs of others.
- Demonstrate accountability, showing an ability to take full responsibility for their own work, decision-making and use of resources.
